

(a) 栅格扫描 (Raster Scan)

(b) 李萨如扫描 (Lissajous Scan)

(c) 螺旋扫描 (Spiral Scan)

(d) 随机扫描 (Random/Vector Scan)

电压-位置公式

$$V_x = A_x \cdot \text{sawtooth}(t/T_{line})$$
$$V_y = A_y \cdot \text{sawtooth}(t/T_{frame})$$

$$V_x = A_x \sin(2\pi \cdot f_x \cdot t + \phi_x)$$
$$V_y = A_y \sin(2\pi \cdot f_y \cdot t + \phi_y)$$

$$V_x = A \cdot t \cdot \cos(2\pi \cdot f_s \cdot t)$$
$$V_y = A \cdot t \cdot \sin(2\pi \cdot f_s \cdot t)$$

$$V_x = V_x(t) \text{ (Target ROI)}$$
$$V_y = V_y(t) \text{ (Target ROI)}$$

帧率限制因素

$$T_{frame} = N_{line} \cdot T_{line}$$

$$T_{frame} = \text{LCM}(1/f_x, 1/f_y)$$

$$T_{frame} = N_{ring}/f_s$$

$$T_{frame} = N_{point} \cdot T_{response}$$

典型应用场景

常规 FLIM/共聚焦成像
(三路同步 FIFO 采集的最优解)

超高帧率成像
(如：活体血流动态、快速钙信号)

荧光相关光谱 (FCS)
中心区域高频采样追踪

光遗传学刺激 / 神经元靶向漂白
(最大化跳过无效暗区)
